

ISC | Building Resilient Futures For Power Utilities

Power Utilities -A Critical Community Lifeline

Power utilities are a critical lifeline for communities and crucial to our livelihood and economic prosperity. Delivering electricity is complex and relies on a functioning and resilient system of power generation, transmission, and distribution of energy. A disruption in the delivery of power can occur for a variety of reasons and the scale of this disruption will likely be a result of where in the generation and distribution process it occurred. Power utilities' timely response to restore power will allow the community to return to normalcy and customer satisfaction after a disruption.

Comprehensive Emergency Management Programs For Utilities

Emergency management programs for power utilities are about more than being able to rapidly respond to power outages. It is an ongoing process of preparedness, response, recovery, and mitigation that begins well before a disaster hits. Being able to quickly and safely restore power and recover after a disaster is directly correlated to developing a comprehensive but efficient preparedness program that adheres to regulatory requirements.

ABOUT US

Integrated Solutions Consulting is a professional services firm focused on developing and implementing comprehensive crisis and consequence management solutions. We are a team of innovative problem-solvers that combine experience and evidence-based knowledge to deliver practical, best practice results across multiple industries to make communities safer and more resilient.
